

~~Mobile~~ Remote Vending System

**Get Sales, Stock & Status Data
Change Vend Price
Using a Standard Mobile Phone**

What does it do?

The system can be interfaced with new or existing vending machines for the purpose of providing Machine to Man or Machine to PC, wireless communication link. Any digital, mobile phone can be used to send or receive data and therefore, can be used to control or acquire data from a machine.

How does it work?

The system utilizes the ability of a digital, mobile network to send and receive data without making a phone call. The user is not charged for air time and is instead, charged for the amount of information transmitted. This provides cheap and efficient means of communication with a vending machine.

What can it be used for?

Acquire stock, sales and machine status information using a PC or a mobile phone. Get a fault or "out of stock" report from a machine to a serviceman's mobile phone. Change vending prices, enable or disable a machine.

How do I interface it with my machine?

Replace existing control board:

We can supply new control board for your machine, capable of all the features, mentioned above.

Interface to machine's printer or serial port:

If your machine is capable of printing reports, you can get access to the information in the reports.

Add an interface board:

For "hard wired" machines, we can supply an interface board, capable of tracking stock and sales information.

How much does it cost?

Less than a land line or GSM modem.
